Top Features

- **AutoComplete:** Fill your passwords in web sites and applications without typing. AutoComplete works by sending keystrokes to the target window as if you had typed them yourself. It works with any browser or application! You can also fill your passwords using Copy & Paste and Drag & Drop.

- **Random password generator:** Password Vault ships with one of the most sophisticated password generators available today. All these rules are automatically remembered for the next time you need to change the password.

- **Lock your data down:** You can configure Password Vault to lock automatically after a time delay, or you can lock it manually any time you wish.
- **Password, please:** You can require that your master password always be entered for certain operations, regardless of whether Password Vault is locked or unlocked.
- **Mask the Password field:** You can mask the Password field to prevent passers-by from getting a peek at your passwords.
